▪ Abstract

- ❖ The Online Insurance Portal is a web-based application designed to simplify the process of accessing insurance-related information and services. Traditional insurance systems often require customers to visit offices or communicate with agents to obtain policy details, compare plans, or submit requests. This project provides a user-friendly digital platform that enables users to explore various insurance plans, compare their features, view policy information, estimate insurance premiums, and submit claim or inquiry requests online.
- ❖ The portal is developed using HTML, CSS, and JavaScript, focusing on an interactive, responsive, and easy-to-use interface. The system includes modules such as Home Page, Insurance Plans, Plan Comparison, Premium Estimation, Claim Request Form, and Contact Support. The application is designed to work efficiently on both desktop and mobile devices, ensuring accessibility for a wide range of users.
- ❖ The primary objective of the project is to improve user convenience by providing insurance information through a centralized online platform. Although the current version does not include database integration, payment processing, or real claim management, it establishes a strong foundation for future enhancements such as user authentication, backend integration, real-time claim tracking, and secure online transactions.
- ❖ This project demonstrates the practical implementation of front-end web technologies in developing a modern insurance portal and highlights the potential of digital solutions in improving customer experience within the insurance sector.

Outlines

- Introduction

Online Insurance Portal. The main purpose of this project is to simplify the process of accessing insurance information through a web-based platform. Many customers face difficulties in comparing insurance plans, understanding policy details, and obtaining insurance-related services. This portal provides a user-friendly solution where users can browse different insurance plans, compare their features, estimate premiums, and submit claim requests online. The project is developed using HTML, CSS, and JavaScript and focuses on creating a responsive, interactive, and easily accessible platform for users.

Outlines

- Problem Definition

Traditional insurance processes are often time-consuming and require customers to visit offices or contact agents for policy information, purchases, and claim updates.

Outlines

- Problem Solution

The Online Insurance Portal solves the problem of complicated and time-consuming insurance processes by providing a single online platform. Users can easily view and compare insurance plans, estimate premiums, and submit claim requests without visiting insurance offices. This improves accessibility, saves time, and enhances the overall customer experience.

Outlines

- Technical Descriptions

The Online Insurance Portal is a front-end web application developed using HTML, CSS, and JavaScript. The system consists of multiple web pages including Home, Insurance Plans, Plan Comparison, Premium Estimation, Claim Request, and Contact Us. HTML is used to structure the content, CSS is used for designing a responsive user interface, and JavaScript is used to implement interactive features such as form validation, premium calculation, and plan comparison. The portal allows users to browse insurance plans, compare policies, estimate premiums, and submit insurance-related requests through an easy-to-use web interface.

Outlines

- Language Use and Justification

Language Used

HTML5

CSS3

JavaScript

VS Code

Google Chrome

Justification

HTML → Creates webpage structure.

CSS → Makes the website responsive and attractive.

JavaScript → Adds interactivity and calculations.

VS Code → Easy development environment.

Chrome → Testing and debugging.

Outlines

- System Requirement

Laptop/Desktop

Minimum 4GB RAM

Internet Connection
