ONLINE INSURANCE PORTAL

PROBLEM STATEMENT

Traditional insurance processes are often time-consuming and require customers to visit offices or contact agents for information regarding insurance plans, policy purchase, and claim status. Customers face difficulties in comparing different insurance plans and understanding policy benefits.

There is a need for a simple web-based platform where users can easily compare insurance plans, view policy details, estimate premiums, and submit insurance-related requests online.

OBJECTIVE AND SCOPE OF THE PROJECT

Objectives

- To develop a user-friendly Online Insurance Portal.
- To provide insurance plan comparison facilities.
- To allow users to view policy details online.
- To calculate estimated insurance premiums.
- To create a responsive website accessible on desktop and mobile devices.

Scope

The project will focus on the frontend implementation of an insurance portal using HTML, CSS, and JavaScript. The system will allow users to browse insurance plans, compare policies, estimate premiums, and submit forms. The project is intended for educational and demonstration purposes.

METHODOLOGY

Requirement Analysis

- Study insurance portal requirements.
- Identify user needs and system functionalities.

Design

- Create website layout and navigation structure.
- Design UI using HTML and CSS.

Home Page

- Company introduction
- Featured insurance plans

Insurance Plans Page

- Health Insurance
- Life Insurance
- Motor Insurance

Plan Comparison Module

- Compare features of multiple plans

Claim Request Form

- Users submit claim details

Contact Us Page

- Customer support form

Testing

- Form validation
- Responsive design testing
- Browser compatibility testing

Deployment

- Host project using GitHub Pages

PROCESS FLOW

HARDWARE AND SOFTWARE REQUIREMENTS

Hardware

- Laptop/Desktop
- Minimum 4GB RAM
- Internet Connection

Software

- Visual Studio Code
- HTML5
- CSS3
- JavaScript
- Backend
- Google Chrome Browser
-

RESOURCES AND LIMITATIONS

Resources

- Insurance policy information
- HTML, CSS, JavaScript
- Online UI design references
-

Limitations

- No real database integration
- No real payment gateway
- No actual claim processing
- No AI-based premium prediction
- No OCR or e-KYC integration

These features can be added in future versions.

Future Scope

Future enhancements may include:

- User Registration and Login
- Backend using Node.js
- Database using MongoDB/MySQL
- Payment Gateway Integration
- Real Claim Tracking System
- Email Notifications
- Admin Dashboard
- Document Upload and Verification
- Mobile Application

CONCLUSION

The Online Insurance Portal aims to simplify the insurance information and policy selection process through a web-based platform. The project demonstrates the use of HTML, CSS, and JavaScript to build an interactive and responsive insurance website. It provides users with plan comparison, premium estimation, and claim request facilities while serving as a foundation for future enhancements involving databases and backend technologies.
